Projects:

Movie & Live tv App for Android Mobile

Language Used: Android Studio, Core JAVA, Firebase, XML, Onesignal, DBMS

Role: Backend Developer

Description: This Movie & Live tv App has a login OR signup function.

There are two intended users, the customers and the admin. The admin can add/delete the movie and modify details or the subscriptions prices. The customer can browse, search, watch and request for movie.

Notes-Memo app for Android Mobile

Language Used: Android Studio, Core JAVA, XML, Room Database

Role: Backend Developer

Description: The Notes-Memo app can be used to save important notes with Fingerprint Security. This is an offline app. In the notes, user can add an image and a weblink. The user can also modify the color of the note. This app also provides the user to search the notes in real time by the title/subtitle of the specific notes.

EMA (Ongoing Project) for Android Mobile

Language Used: Android Studio, JAVA, XML, Firebase, CameraX, ML Kit, TensorFlow Lite, DBMS

Role: Backend + Frontend Developer

Description: EAM-Smart Employee Attendance Management Application

Using Face and Fingerprint Biometric. There are two intended users, the Employee and the admin(HR). The admin can monitor employee in-time, out-time and working time.

this application first verify Face and Fingerprint Biometric after it will use GPS coordinates to check whether the user is in the office. So, it might take time to get the user's current location, waiting for time-based on the location such as buildings, or other things that cause your device to difficult to find the user's current location.
